

Amanatiadis Stamatis was born in Alexandroupolis, Greece in 1987. In 2010 he graduated from the Department of Electrical and Computer Engineering (DECE), Polytechnic School, Aristotle University of Thessaloniki (AUTH). In October 2016 he was proclaimed a doctor of DECE AUTH, with his doctoral thesis entitled "Advanced numerical modeling of graphene and its application to electromagnetic compatibility". His research interests are focused on the following: Graphene (electromagnetic characterization, surface wave propagation analysis, circuit modeling and applications on THz components), numerical analysis (Finite-Difference Time-Domain method, Finite Element Method and Boundary Element Method), electromagnetic compatibility (EMC) and electromagnetic interference (EMI) problems (measurements, immunity techniques, shieldings etc.), waveguide and free-space propagation problems (special antennas, miniaturization, waveguide structures etc.) and non-destructive evaluation (acoustic microscopy, UV/VIS/IR and Raman spectroscopies, IR and UV fluorescence imaging in the field of cultural heritage and biomedical engineering). He is a member of the IEEE Antennas and Propagation Society, the IEEE Microwave Theory and Techniques Society and the Technical Chamber of Greece.
